

## PURest® Air Dryers

### Dot Matrix Identification Process Supplier Change

Haldex PURest Air Dryers equipped with the Haldex MTC+ cartridge provide superior drying performance while removing fine oil and hydrocarbon particles preventing them from entering your air brake system.

These dryers are currently identified by an adhesive label attached to the upper body. To further improve our products and assist our customers in identifying genuine Haldex Air Dryers, Haldex will replace the adhesive label with a Dot Matrix Metal Marking process applied to the dryer's lower body.

The identification marking will remain legible following the painting process and through extended periods of service.

In our efforts to continuously improve the Haldex Air Dryer Product Offering, an additional supplier has been approved for the lower body portion of the PURest Air Dryer

The target implementation date for these changes is October 12, 2011 and will affect the Haldex part numbers.
